

Installation Guide

LED Light Bulbs

Follow this guide to install from your kit:

- 8w LED Globe
- 10w LED Globe

INSTRUCTIONS

1. First you must choose an incandescent light bulb you will remove and replace with your new efficient LED light bulb. **Tip: Look around your home and determine which light is used the most. This is the bulb you should replace.**
2. Always use the lowest wattage bulb that still gives you the light you need.
3. Turn off the power to the bulb and allow your old bulb to cool prior to removal. Then remove the old light bulb. **WARNING: Bulb may be hot.**
4. Dispose of the old bulb properly. **WARNING: Light bulbs are made of thin glass and can cut you if they break.**
5. Remove your new LED light bulb from the packaging.
6. Install your new LED by twisting it in a clockwise direction into the socket until snug. Turn the light on to test.
